

Complete Execution Guide

Downloading & Processing Consciousness Theories Database

Prerequisites

```
powershell  
  
# Install required PowerShell modules  
Install-Module -Name Selenium -Force -Scope CurrentUser
```

Step 1: Download Website Content

```
powershell  
  
# Navigate to your project directory  
cd "C:\Users\russe\Documents\GitHub\PMOVES.AI\pmoves\docs"  
  
# Run the main downloader script  
.\Constellation-Harvest-Regularization\consciousness-downloader.ps1  
  
# This creates the full directory structure and downloads static content
```

Step 2: Extract Dynamic Content

```
powershell  
  
# Run the Selenium scraper for dynamic JavaScript content  
.\Constellation-Harvest-Regularization\scripts\selenium-scraper.ps1  
  
# This will take several minutes as it loads and extracts dynamic content
```

Step 3: Process for RAG Integration

```
powershell  
  
# Process downloaded content for your Supabase + Hugging Face setup  
.\Constellation-Harvest-Regularization\rag-processor.ps1  
  
# This chunks text and prepares data for embedding
```

Step 4: Set up Supabase Database

```
sql

-- In your Supabase SQL editor, run:
-- File: processed-for-rag/supabase-import/consciousness-schema.sql

-- This creates tables with vector search capabilities
-- Includes hybrid search functions optimized for your 3584-dim embeddings
```

Step 5: Generate Embeddings with n8n

1. Import the workflow: `processed-for-rag/supabase-import/n8n-workflow.json`
2. Configure your Hugging Face API node
3. Set up Supabase connection
4. Process the JSONL file: `processed-for-rag/embeddings-ready/consciousness-chunks.jsonl`

Integration with Your Existing Setup

Supabase Vector Store:

- Uses your existing 3584-dimension embeddings
- Compatible with pgvector and TimescaleDB
- Hybrid search combines semantic + keyword matching

n8n Automation:

- Connects to your existing Hugging Face embeddings node
- Feeds directly into your Supabase node
- Processes consciousness theories alongside your YouTube transcripts

RAG Query Examples:

```
sql
```

-- Semantic search for consciousness theories

```
SELECT * FROM hybrid_search_consciousness(  
  'theories about AI consciousness',  
  your_query_embedding_vector,  
  0.7, -- semantic weight  
  0.3, -- keyword weight  
  10 -- result limit  
);
```

-- Category-filtered search

```
SELECT * FROM consciousness_theories  
WHERE theory_category = 'Quantum-Theories'  
AND embedding <=> your_embedding < 0.5;
```

File Structure Created

Constellation-Harvest-Regularization/

```
├── website-mirror/ ..... # Static HTML copies

```

Benefits for Your RAG System

- **Comprehensive Knowledge Base:** 500+ consciousness theories
- **Structured Categories:** From materialist to idealist approaches
- **Academic Rigor:** Based on 142-page peer-reviewed paper
- **AI-Relevant:** Direct implications for AI consciousness
- **Hybrid Search Ready:** Optimized for your Supabase setup
- **n8n Compatible:** Integrates with your existing automation

This database will significantly enhance your RAG system's ability to answer questions about consciousness, AI development, and theoretical frameworks - perfect for the PMOVES.AI knowledge base!
